

NoorSafar — Comprehensive Theme & Project Review

Design Reconstruction • WordPress Architecture • Consolidation • QA • Final ZIP Plan

Review basis: noorsafar-theme.zip + New folder.zip, including the visual reference, theme source, Core plugin, QA records, build artifacts, demo assets and supporting documentation.

Review date: 1 October 2026

1. Executive Summary

The two supplied packages contain substantial NoorSafar work, but they represent two related layers of the project rather than one already-certified production package. The first ZIP is primarily the visual/theme implementation. The second ZIP is the broader project workspace containing that theme lineage, a separate technical v2 theme, the NoorSafar Core plugin, source imagery, QA/build documentation and candidate ZIPs.

The supplied Web Demo/reference is a strong visual master: deep emerald/teal, warm ivory, antique gold, cinematic Islamic-travel imagery, editorial typography, rounded cards, mihrab/arch motifs and restrained 2D/3D motion. The current visual theme already implements the requested homepage section order as component files. The technical v2 work contains valuable booking, CPT, prayer-time, AJAX, security and RTL foundations.

The correct finalization strategy is therefore consolidation—not another unrelated rebuild: retain the approved visual theme as the presentation master, retain the hardened Core plugin as the business-logic layer, remove duplicate/legacy implementations, wire every visual component to the plugin's dynamic data model, then run full WordPress staging QA. The packages must not be described as production-certified until runtime QA passes.

2. Package Inventory

Package	What it contains	Role	Assessment
noorsafar-theme.zip	Theme PHP, CSS, JS, visual assets, component templates, Customizer, theme-side wrappers	Visual presentation master	Strong visual foundation; needs final integration/QA
New folder.zip	Master project workspace, Core plugin, technical v2 theme snapshot, source images, QA, build scripts, candidate ZIPs	Full engineering/reference workspace	Rich technical material; contains duplicate/legacy branches that must not be shipped together

Important: the final WordPress deliverable should be two installable packages, not the entire development workspace: 1) noorsafar-theme.zip and 2) noorsafar-core.zip. The workspace ZIP itself should never be uploaded as a theme.

3. Visual Master — Design Specification

The supplied reference image establishes the homepage composition. The implementation should preserve the section order below.

Section	Final design direction
Header	Sticky/glass deep-emerald navigation; official NoorSafar logo; Home, Journey+, Destinations+, Gallery, Ziyarat,

	Blog, Contact; language selector; search; gold Book My Journey CTA.
Hero	Approx. 620px desktop cinematic banner; emerald gradient over sacred-travel artwork; eyebrow, large serif H1, supporting copy, primary/secondary CTAs, right mihrab badge with Arabic calligraphy.
Feature Strip	Five-column white strip: Hajj & Umrah, Ziyarat, Islamic Tours, Custom Packages, 24/7 Support. Gold line icons, ivory circular icon backgrounds, dividers.
Featured Journeys	Ivory section; left intro and right three package cards. Cards show image, title, duration, destination, manual price/status and CTA. No automatic price conversion.
Blessed Destinations	Dark emerald band; four arch/mihrab cards: Makkah, Madinah, Jerusalem (Bait-ul-Muqaddas), Karbala. Responsive carousel.
Trusted Travel Partner	Ivory three-part layout: left sacred-travel visual/quote, centre six benefits, right Quran/rehal visual.
Islamic Audio	Three-column section: introduction, real HTML5 audio player, category list. Audio must use rights-cleared files.
Gallery	Five-image horizontal gallery with lightbox, captions, keyboard/focus support and mobile scroll-snap. Real journey images should replace AI/demo imagery before launch.
Testimonials	Dark emerald band with real consented testimonial CPT entries. Demo testimonials must not remain in production.
CTA	Cinematic mosque skyline strip with emerald overlay and gold Book Now CTA.
Footer	Deep emerald six-column footer: brand, journeys, destinations, resources, company, contact; social links, legal links and floating WhatsApp.

4. Locked Brand System

Token	Value / rule
Deep Emerald	#0A3B2C
Dark Teal	#0D5C58
Warm Ivory	#FDFBF7
Antique Gold	#C5A059
Typography	Editorial serif display for headings + clean sans-serif body; local/self-hosted fonts preferred for production
Shape language	20px-class rounded cards, pill CTAs, circular controls, arch/mihrab silhouettes
Depth	Subtle shadows, glass surfaces, gold hairlines, restrained 3D tilt; no excessive effects
Motion	Scroll reveal, hover zoom, subtle parallax/tilt, lightbox, carousel; respect prefers-reduced-motion
Photography	Cinematic, grounded, authentic Islamic architecture/travel imagery; no misleading presentation of generated images as real journeys

5. Homepage Implementation Blueprint

Hero data

Hero image, eyebrow, title, subtitle, badge text and CTA URLs must be editable. The final approved hero artwork should be used rather than a development placeholder.

Packages

Query published package CPT records. Price is manually entered by the administrator. Status controls whether a numeric price or text such as Coming Soon / Price Not Set / Contact for Price / Sold Out is displayed.

Destinations

Use destination records or controlled options. Each card needs title, image, URL and optional accent treatment.

Trust section

Benefits and imagery should be editable, but the six benefit positions should remain visually stable to preserve the reference composition.

Audio

Use an Audio Track CPT with title, category, thumbnail and file. If no rights-cleared audio exists, hide the section rather than shipping fake tracks.

Gallery

Use Gallery/media records with thumbnail, high-resolution image and caption. Do not market AI-generated demo images as real trip moments.

Testimonials

Use only real, consented testimonial CPT records in production. No fallback demo identities should be visible after launch.

CTA/Footer

All contact, WhatsApp, social and legal links should come from one settings source.

6. WordPress Information Architecture

Page / archive	Recommended slug	Primary purpose
Home	/	Visual entry point and conversion
About	/about/	Story, mission, team, registrations/trust information
Journeys	/tours/	All travel packages
Hajj Packages	/hajj-packages/	Hajj package listing
Umrah Packages	/umrah-packages/	Umrah package listing
Ziyarat	/ziarat/	Ziyarat programs/sites
Pakistan Tours	/pakistan-tours/	Pakistan/Northern tours
Programs	/programs/	Special programs and events
Single Package	/tours/{slug}/	Details, itinerary, dates, price/status, booking and WhatsApp
Destinations	/destinations/	Destination index
Single Destination	/destinations/{slug}/	Destination detail + related packages
Gallery	/gallery/	Filterable gallery + lightbox
Blog	/blog/	Posts, categories, single articles
Islamic Tools	/islamic-tools/	Prayer times, Qibla, Hijri, Tasbih
Book My Journey	/book-my-journey/	Primary booking form
Contact	/contact/	Contact form, map, phone, WhatsApp and address
FAQ	/faq/	Frequently asked questions
Privacy	/privacy-policy/	Legal privacy page
Terms	/terms/	Terms and conditions
Cancellation	/cancellation/	Cancellation/refund policy
Search / 404	system	Branded recovery/search experience

7. Content Model / CPT Plan

CPT / record	Key fields	Frontend use
Tour	title, featured image, duration, destination, price, price status, departure, seats, badge, featured	Packages and booking
Pakistan Tour	same package fields + Pakistan itinerary metadata	Pakistan tour cards/detail
Ziyarat / Darbar	site/program details, dates, venue, gallery, itinerary	Ziyarat pages
Program	date, venue, description, gallery, category	Special programs/Urs/event pages
Destination	title, image, history, location, related packages	Destination archive/detail
Testimonial	name/display name, journey, quote, photo, consent flag	Testimonials
FAQ	question, answer, category/order	FAQ and package detail
Audio Track	title, category, file, thumbnail	Audio player
Gallery / Media	image, full-size image, caption, category	Gallery/lightbox
Booking	customer data, package, travel details, status, timestamps	Admin booking workflow

Business logic should live in NoorSafar Core. The theme should primarily render data and provide presentation/UI behavior.

8. Pricing and Currency Rules

Prices must remain manually controlled. The admin workflow should be: Market Assessment → Government Requirements → Taxes/Charges → Business Pricing Decision → Final Published Price → Publish. The site must never auto-calculate a selling price from market data.

Status	Frontend display
Draft	Not shown to public / staging only
Coming Soon	Coming Soon
Price Not Set	Price Not Set
Contact for Price	Contact for Price
Available	Published manual price
Sold Out	Sold Out / Fully Booked

Currency display should be controlled by the selected language/site context (English: USD presentation where configured; Urdu: PKR; Arabic: configured Arabic-market currency). Do not silently auto-convert exchange rates.

9. Technical Consolidation Plan

1. Use the visual theme as the single presentation baseline: header, footer, front page and template-parts/home/*.
2. Use the hardened NoorSafar Core plugin as the single business-logic layer for CPTs, booking, settings, prayer times, AJAX, security and admin data.
3. Do not ship both the old technical v2 theme and the visual theme.
4. Remove or neutralize duplicate CPT/business-logic registration in the theme where Core already owns the feature.
5. Keep theme-side wrappers only where they adapt presentation to Core APIs/shortcodes.
6. Add/verify dedicated frontend templates for every public CPT actually used by the navigation.
7. Move contact/social/business values fully into NoorSafar → Settings; eliminate hardcoded duplicates from header/footer/schema.
8. Replace placeholder/demonstration media with approved production media or clearly mark content as staging.
9. Wire language switching to a real multilingual plugin or a documented single-language/RTL strategy.
10. Build the final packages from one master workspace only.

10. Findings From the Supplied Source

Area	Finding
Visual implementation	The visual theme already has componentized homepage files and the correct reference order. This is the right base for visual fidelity.
Technical foundation	The broader project contains a Core plugin with booking, CPTs, Islamic tools, admin classes, AJAX and security layers.
Runtime certification	The supplied QA records explicitly state that static checks passed but runtime WordPress QA was not performed on the development machine.
Duplicate architecture	The workspace contains a visual theme branch and a separate technical v2 theme branch. These should be treated as reference layers, not two production themes.
Hardcoded contact values	The visual theme still contains display contact values in header/footer/schema even though comments describe Core settings as the source of truth. These should be removed from templates.
Navigation defects	The header currently contains the visible spelling “Ziyaret” in one navigation item and its Book My Journey CTA points to a homepage anchor. The final route should be the dedicated booking page.
Language switch	The header contains conditional language-switch logic tied to WPML-style functions; a complete multilingual implementation still needs a verified plugin/configuration and real translations.
Audio	The audio template references placeholder upload paths. Rights-cleared audio must be supplied and tested or the section should be hidden.
Testimonials	The theme includes demo fallback testimonials. Production must use real, consented testimonial records.
Gallery	The visual theme includes AI/generated hero imagery and mockup thumbnails. These are suitable for design demonstration but should not be represented as real trip photography.
Legal	Privacy, terms and cancellation content require owner/legal review before launch.
Images	Several reference assets are intentionally small mockup crops. Production imagery should be replaced by properly sized WebP/AVIF/JPEG assets.
360 viewer	The technical documentation correctly notes that a real 360 viewer needs a sequential frame set; a handful of gallery images is not a true 360 sequence.

11. WordPress-Ready ZIP Structure

Final delivery should contain only installable packages with clean top-level folders:

- noorsafar-theme.zip
 - └─ noorsafar-theme/
- noorsafar-core.zip
 - └─ noorsafar-core/

The large development workspace, source mockups, QA documents, duplicate themes, build scripts and reference ZIPs belong outside the upload packages.

12. Staging QA Gate — Required Before Production

11. Fresh WordPress staging installation with PHP 8.x and MySQL/MariaDB.
12. Activate NoorSafar Core first, then NoorSafar theme.
13. Permalinks: Post name; save/flush rewrites.
14. Verify all CPTs, taxonomies, admin meta boxes and settings.
15. Verify homepage at 390, 768, 1024 and 1440 widths.
16. Verify RTL at mobile and desktop widths.
17. Verify no PHP warnings/notices/fatal errors with WP_DEBUG enabled.
18. Verify browser console and network requests are clean.
19. Submit booking: database record → admin notification → customer email → WhatsApp link.
20. Test seat inventory and all booking status transitions.
21. Test prayer times, API fallback and cached response.
22. Test Qibla/tasbih/Hijri where enabled.
23. Test audio play/pause/seek/category switching with real files.
24. Test carousel, lightbox, search overlay and video modal with keyboard, Esc and focus return.
25. Test language switch with real Urdu/Arabic content.
26. Test image lazy loading, WebP/AVIF/JPEG fallback and hero priority.
27. Run SEO/schema, sitemap, canonical, Open Graph and multilingual/hreflang checks.
28. Run accessibility checks including focus, contrast, alt text and reduced motion.
29. Run security scan, backup/restore test and SMTP delivery test.
30. Only after all gates pass should the final ZIPs be promoted to FINAL-UPLOAD.

13. Production Content Required From Owner

Item	Required before launch
Approved logo	Prefer SVG or high-resolution transparent master
Hero artwork	Final approved wide hero at production resolution
Package data	Dates, duration, hotels, inclusions/exclusions, seats, manual price/status
Real gallery	Approved journey/architecture images and captions
Testimonials	Real text, display names/photos and consent
Audio	Rights-cleared MP3/streaming files, titles and categories
Team/about content	Names, roles, approved biographies/photos
Licences/registrations	Verified business information where applicable
Legal text	Owner/legal-reviewed privacy, terms, cancellation/refund
Business settings	Phone, WhatsApp, email, office address, social URLs
SMTP	Verified sender/domain and delivery test
Hosting/domain	Production WordPress hosting with SSL, backups and adequate resources
Languages	Approved English, Urdu and Arabic translations

14. Final Build Sequence

31. Freeze the supplied reference image and brand tokens as the visual master.
32. Consolidate the visual theme + hardened Core plugin into one master workspace.
33. Resolve duplicate CPTs, duplicate settings and duplicate business logic.
34. Finish all missing/dedicated templates and data bindings.
35. Clean navigation, contact values, language switch, demo fallbacks and asset paths.
36. Replace/optimize production imagery and audio.
37. Build clean noorsafar-theme.zip and noorsafar-core.zip.
38. Install on a clean staging WordPress site.
39. Execute the complete runtime QA gate.

40. Fix every failed test and rebuild.
41. Repeat staging QA until the full gate passes.
42. Promote only the verified packages to FINAL-UPLOAD.
43. Perform a final production smoke test after deployment.

15. Final Assessment

The supplied materials are sufficient to continue toward a complete NoorSafar WordPress build. The visual theme should be treated as the design master, while the NoorSafar Core plugin and its corrected technical components should supply the business logic. The project is not yet a production-certified final ZIP because runtime WordPress QA, real content, SMTP delivery, multilingual verification, asset replacement and several integration clean-ups remain.

The most important architectural rule for the final package is separation of responsibility: Theme = appearance/templates/UI; Core Plugin = data/business logic/security/booking/tools. This keeps the design editable and maintainable while allowing the visual layout to remain faithful to the supplied reference.

Appendix A — Reference Homepage Order

Header → Hero → Feature Strip → Hajj & Umrah Packages → Blessed Destinations → Your Trusted Travel Partner → Islamic Audio → Moments That Inspire → Testimonials → CTA → Footer

Appendix B — Review Deliverable

This document is the consolidated review/design/build specification derived from the two supplied ZIP packages. It is intended to be handed to the WordPress implementation workflow as the single planning reference before the final ZIP build.
